Senior Mobile & Full-Stack Engineer specialising in cross-platform React Native and modern web applications. Delivers scalable products from concept to production across mobile and web, with deep expertise on both the JavaScript and native layers. Builder of open-source RN tooling and native packages that extend React Native beyond its out-of-the-box capabilities.

## Experience

---

### Digital Gates

06/2025 – Present

*Mobile Developer*

- Developed the Speedy Hire UK cross-platform mobile application using React Native, owning the architecture from initial setup through production release on both App Store and Google Play.
- Built custom native modules and packages bridging React Native to native iOS and Android APIs, enabling capabilities beyond standard RN — including advanced splash screen behaviour, native-layer animations, and platform-specific enhancements.
- Engineered complex animation systems using Reanimated and React Native Gesture Handler, implementing physics-based gestures, shared element transitions, and multi-step orchestrated sequences.
- Integrated third-party native SDKs directly into the app build pipeline, configuring Xcode and Gradle settings to ensure stable native dependency resolution across both platforms.
- Implemented secure authentication flows and API integrations, delivering seamless customer experiences across vehicle hire workflows.
- Collaborated with designers in Figma to translate designs into pixel-perfect, responsive interfaces across a wide range of device sizes and OS versions.

### We The Makers

11/2023 – 06/2025

*Full stack software developer*

- Led and mentored a mobile development team, conducting code reviews, establishing branching strategy and PR standards, and guiding architectural decisions across multiple concurrent projects.
- Built and shipped scalable React Native and Next.js applications from concept to production, covering complex state management, offline support, push notifications, and bilingual RTL/LTR UI.
- Optimised server-rendered and statically generated Next.js sites, improving Lighthouse performance scores and SEO rankings through ISR, image optimisation, and bundle analysis.
- Designed and implemented CI/CD pipelines with GitHub Actions, automating build, test, and deployment workflows.

### Abdul Aziz Al Ghurair School of Advanced Computing (ASAC)

12/2022 – 10/2023

*Full stack in JavaScript*

- Full-stack development with JavaScript, backend with Express.js, and frontend with React.js.

## Projects

---

### NativeTide

06/2025 – Present

Open-source CLI that scaffolds a production-ready React Native (Expo) project in seconds. Ships with TypeScript, Zustand state management, i18n with instant LTR/RTL switching, auth-ready navigation flows, an Axios API layer, and full developer tooling — eliminating weeks of boilerplate setup for new projects.

### Taj Alsafah

03/2025 – 12/2025

Built and launched an internal operations mobile app with role-based workflows and multi-stage approval chains. Delivered advanced list/table UX, dashboards, secure API integration, offline support, and bilingual EN/AR RTL UI — released to both App Store and Google Play.

### Balsam United

09/2025 – 10/2025

Rebuilt and restructured the entire Balsam United React Native application from the ground up, delivering a production-ready architecture in 3 weeks against a projected 6-month timeline. Included role-based flows, real-time chat, health integrations, secure REST APIs, and complete EN/AR RTL support — shipped to both stores.

### Trevi

*WE.THE.MAKERS*

A modern finance app designed to make money management easier, featuring smooth wallet top-ups, cashback incentives, in-depth spending insights, and shared wallets for families.

### Gomint

*WE.THE.MAKERS*

A mobile solution for on-demand pickup and delivery, offering geo-tracking, accurate delivery estimates, and real-time communication between users and service providers.

### Sipes

*WE.THE.MAKERS*

A customer loyalty platform that allows users to earn points from purchases, quickly scan QR codes through a mobile app, and redeem their points for various rewards.

### +8 Private Projects

These projects are private and cannot be shared at the moment, but they mainly focus on web and mobile applications, where I played a key role in their development.

## Education

---

### British Diploma in Software Engineering

*Abdul Aziz Al Ghurair School of Advanced Computing (ASAC)*

### AWS re/Start

*Amazon Web Services*

03/2022 – 07/2022

## Certificates

---

- AWS Cloud Practitioner (Chams)
- Front End Development Libraries (FreeCodeCamp)
- Responsive Web Design (FreeCodeCamp)
- Mobile Development (Udacity)

## Skills

---

### Mobile

React Native, Expo, EAS Build, Reanimated, Gesture Handler, TypeScript

### Frontend

React, Next.js, TypeScript, Zustand, i18n / RTL, Tailwind CSS

### DevOps & Cloud

AWS EC2, GitHub Actions, CI/CD pipelines, App Store & Play Store deployment

### Tools

Figma, Git, Xcode, Android Studio, Postman
